Query Tool

The screenshot shows the ActiveData Query Tool web application. A red box highlights the URL in the browser's address bar: `http://activedata.allizom.org/tools/query.html#find=iAdXbAvC`. A red arrow points from this box to the text "URL to retrieve this query". Another red arrow points from the text to the "Share" button, which is also highlighted with a red box. The interface includes a sidebar with a "Done" button and a list of links: Unittest Tutorial, Unittest Schema, Qb Expressions, Reference Documentation, Bugzilla Tutorial, and ActiveData code on Github. The main area displays a query editor with a JSON query: `{"from": "unittest"}`. Below the editor are buttons for "EXECUTE", "Copy", "Share", "as Table", and "as Json". A table of results is shown below these buttons, with columns: rownum, run.suite, result.result, etl.source.source.source.id, etl.source.source.bucket, and run.stats.ok. The table contains one row of data.

Query Tool

The screenshot shows the ActiveData Query Tool interface in a Mozilla browser. The browser's address bar displays the URL `http://activedata.allizom.org/tools/query.html#find=iAdXbAvC`. The tool's title is "ActiveData Query Tool". On the left, a sidebar contains a "Done" button and a list of links: "Unittest Tutorial", "Unittest Schema", "Qb Expressions", "Reference Documentation", "Bugzilla Tutorial", and "ActiveData code on Github". The main area features a text input field with the Qb query `{"from": "unittest"}`. Below this field is a row of buttons: "EXECUTE", "Copy", "Share", "as Table", and "as Json". The "as Json" button is highlighted with a red box, and a red arrow points to it from the text "Format as JSON" which is overlaid on the interface. Below the buttons, the resulting JSON output is displayed, also enclosed in a red box. The JSON output is a meta-object containing response times, format, saved name, and the converted Elasticsearch query.
